

PURPOSE

Provide an update on the dam project, maintenance plan, legal activity, and next steps. This summary is based on the KCCD Status Summary dated August 27, 2026 and recent developments, and will be updated as we continue to move toward final resolution.

CURRENT STRATEGY

The strategy we have followed to date has resulted in the dam now being repaired, without borrowing additional contingency funds, and with a clear plan for long-term maintenance.

LEGAL FEES

An increase in legal fees is expected as we just finished a month-long construction project which required our attorneys' participation. The recent invoice has depleted the current retainer and a replenishment of \$800 is requested to cover ongoing work.

1. DAM PROJECT – COMPLETED

- ✓ Remediation and repair of the Knox Cattle Dam is complete.
- ✓ Construction phase finished after a month-long effort (delays due to weather and incorrect materials).
- ✓ No change orders were required.
- ✓ Dam is now repaired and functioning as intended.

2. ONGOING MAINTENANCE ASSESSMENTS

- Maintenance assessments will be made to the wider group – not just Phase VII and owners.
- Receiver recommends a TWO-LEVEL ASSESSMENT (not a flat rate).

ASSESSMENT LEVEL	MONTHLY AMOUNT
High Density (Condos)	\$12.08
Low Density (Single-Family)	\$17.25

- Details of costs are provided in the attached spreadsheet (multiple tabs).

3. VEGETATION CLEARING

- No upkeep of perimeter vegetation in recent years; areas are now overgrown.
- Overgrowth does not threaten dam effectiveness and was not part of the project.
- Several residents have requested the perimeter be cleared and returned to its former condition.
- No project funds remain for this.
- Receiver is obtaining an estimate.
- Cost will require a one-time increase to the proposed monthly assessment.

RECOMMENDATION: Approve the one-time vegetation assessment of approximately **\$175 per property for all homeowners**, in return for the non VII and VIII owners approving and agreeing to take part in the maintenance assessments going forward.

HIGH DENSITY vs. LOW DENSITY – WHAT IT MEANS

The assessment is based on the amount of impervious surface (roofs, driveways, parking lots, etc.) attributable to each dwelling unit, which determines each property's impact on the stormwater system and dam.

HIGH DENSITY (CONDOS)

- Multi-family / condominium developments
- More compact development with less impervious surface per dwelling
- Impervious surface per unit: ~ 3,825 – 4,375 sq. ft.

MONTHLY ASSESSMENT:

\$12.08
per month

LOW DENSITY (SINGLE-FAMILY)

- Single-family homes
- More impervious surface per dwelling (avg. ~ 5,867 sq. ft. per unit vs. ~ 3,825 – 4,375 sq. ft. for condos)
- Impervious surface per unit: ~ 5,867 sq. ft.

MONTHLY ASSESSMENT:

\$17.25
per month

WHICH PROPERTIES FALL INTO EACH CATEGORY?

HIGH DENSITY (CONDOS) – \$12.08 / MONTH

PROPERTY / DEVELOPMENT	DESCRIPTION
Watersedge (Condominiums)	Multi-family condominium development
Woodberry Glen (Condominiums)	Multi-family condominium development

LOW DENSITY (SINGLE-FAMILY HOMES) – \$17.25 / MONTH

PROPERTY / DEVELOPMENT	DESCRIPTION
All Single-Family Homes in The Landings (Not in Watersedge or Woodberry Glen)	Single-family detached homes with greater impervious surface per unit

Why the difference?

Single-family homes have more impervious area per unit (avg. ~ 5,867 sq. ft.) compared to condos (~ 3,825 – 4,375 sq. ft.), so they are assessed a higher share of the maintenance costs.

KEY NUMBERS AT A GLANCE

Proposed Monthly Assessments

- High Density (Condos): **\$12.08**
- Low Density (Single-Family): **\$17.25**

Proposed One-Time Vegetation Assessment

~ **\$175 per property** (all homeowners)

Assessment Applied To

- Wider group – not just Phase VII and VIII owners.

NEXT STEPS

Consensus or feedback on the proposed maintenance assessment.

Consensus on the one-time assessment.
